BlueCat Certifications

The Introduction to BlueCat TestFlight empowers pre-sales and sales teams with practical knowledge of BlueCat's products, enhancing their understanding of the value our solutions bring to deals. During this TestFlight, we will delve into key areas such as BlueCat appliances and architecture, explore the technical and business challenges we solve, and Solution Architects engage in a live demo lab to experiment with BlueCat's solutions firsthand. Finally, the TestFlight will conclude with a knowledge check and a gift card upon completing the knowledge check.

The BlueCat Channel Solutions Architect Certification program was designed to engage and evaluate esteemed Solutions Architects within our channels and partners. Its purpose is to equip them with the skills necessary to proficiently design, scale, and develop architecture and proposals for BlueCat projects. This comprehensive program places a strong emphasis on instilling best practices when it comes to designing a DDI architecture. It encompasses a wide range of topics such as High-level Design, DNS and DHCP Architecture best practices, Redundancy & Management Layer Architectures, Best Sizing, use-case practices, and BlueCat architecture best practices. The program has been thoughtfully designed to span a duration of 2 hours. Upon completion of the course, instructors will provide channels SA's with architecture use cases through slide-based exercises, followed by a final exam lasting 30 minutes. This exam will be evaluated by BlueCat Technical Partner Managers.
