

With Snowflake, it is possible to quickly start an account, ingest data, and begin building. While this ease of use is beneficial, it can also lead to a shaky foundation if development begins hastily without consideration of the overall design, architecture, technology stack, and best practices.

Trace3's Snowflake Foundations provides an accelerator along with the benefits of our hands-on experience to ensure your Snowflake deployment is done properly, allowing it to serve as the centerpiece of your data initiatives now and into the future.

### ESTABLISH A SNOWFLAKE FOUNDATION FOR YOUR MODERN DATA STACK

The Trace3 process helps quickly narrow the ecosystem of tools that work with Snowflake to accelerate the creation of an end-to-end platform for ingestion, transformation, and orchestration of workloads for all your business challenges. We consider the skillsets available within your organization to minimize associated hiring or reskilling costs.

### SNOWFLAKE CONSIDERATIONS

- How will I ingest, transform, or orchestrate my data?
- How do I establish a secure, well governed platform?
- Can I improve the use of external data or monetize my data?
- What kind of platform will my team be able to support?

#### ESTABLISH FRAMEWORK

- Tool & technology evaluation
- Build solid ingestion layer

#### PRODUCTIONIZE PLATFORM

- Automate configurations & security
- Data model deployment management

#### ACCELERATE BUSINESS VALUE

- Rapidly enable self-service
- Foundation of all analytics use cases

Your data is the fuel of your organization's success. To learn more, contact your Trace3 representative or visit [Trace3.com](https://www.Trace3.com).
