

The rise of unforeseen environmental forces continues to impact the global community and requires corporate leaders to quickly adjust business strategy to avoid service disruption on multiple fronts.

The approach to mitigating these unanticipated variables begins with end users—your team members. Shifting the majority of operational activities outside of the traditional workspace introduces challenges in delivery, scale, security, and collaboration. The global manufacturing supply chain also may encounter delays in production output, increasing complexity of the situation.

RAPID TECHNOLOGY REVIEW

Trace3 is prepared to help organizations create and rapidly deploy a Remote Workforce Mobility strategy. Our goal is to identify and prioritize critical applications and develop a cloud-first approach that helps maintain services in the face of a workforce disruption. We have identified key partners who offer quick-to-market solutions and are uniquely skilled to assist.

REVIEW

- Do you have a solution for meetings and content-rich visual collaboration?
- Is a Virtual Desktop Infrastructure (VDI) part of your workforce mobility plan?
- Will you require a remote access virtual private network (VPN) for teleworkers?
- What is your internet edge bandwidth? Is it readily scalable?
- What is your minimum endpoint operational requirement?
- What is your security plan for a mobile workforce? Is this plan comprehensive and agile?
- Is your infrastructure rapidly scalable?

COLLABORATION

Collaboration with a large remote tele-workforce will be critical for individual performance and business success.

ENDPOINT TELEWORKER GATEWAY

This solution simplifies the process of provisioning and allows infrastructure extension for remote employees into the home office.

VIRTUAL DESKTOP INFRASTRUCTURE

VDI eliminates the need to provide end users with mobile end-user computing hardware that can perform job functions in a controlled and secure environment.

NETWORK AUTOMATION AND ASSURANCE

Network automation and assurance offers plug-and-play and zero-touch provisioning that allow non-technical users to deploy physical hardware during periods of travel restriction.

HYPERCONVERGED INFRASTRUCTURES

Hyperconverged infrastructures are a means of deploying compute and storage rapidly in order to meet the demand of a remote workforce, with low administrative overhead.

HYBRID CLOUD

As companies begin to execute business continuity plans, increasing storage and compute footprints to accommodate resource demands may be difficult with increasing lead times. Some clients may need to extend their data center into public cloud infrastructures as a secondary option.

AROUND THE CLOCK SUPPORT

Trace3 offers 24x7x365 managed Help Desk support and can address issues remotely or onsite (in extreme cases) with our Help Desk as a Service offering. One or more of our highly skilled engineers is always available to answer questions, troubleshoot IT issues, and resolve problems quickly and efficiently, staying with you until the problem is resolved.

Schedule a Rapid Technology Review and learn how Trace3 is prepared to help you meet the demands of workforce mobility.
