

In today's rapidly evolving threat landscape, security incidents are no longer a question of if, but when. Organizations must be prepared not only to respond effectively when incidents occur, but also to validate and strengthen their defensive posture beforehand. The best offense is a good defense, and this requires regularly testing, reviewing and updating your security technology, policies and program to ensure you have a formidable plan in place that meets your specific needs.

### OVERVIEW

Organizations face an evolving threat landscape where cyberattacks exploit unknown gaps in security controls. Technical defenses can be misconfigured, drift out-of-sync, or miss new sophisticated attack paths. Without validation, security teams rely on assumptions, not evidence, that their controls are effective, and attackers only need one missed gap to succeed. Trace 3's security experts will advise customers on how to evaluate and integrate Exposure Validation solutions and implement CTEM effectively.

### EXPOSURE VALIDATION SERVICES

- ✓ Strategic advisory regarding implementing exposure validation
- ✓ Platform education and guidance
- ✓ Recommendations for simulation frequency
- ✓ Guidance implementing remediation recommendations
- ✓ Threat vector coverage (Email, Web, Endpoint, Cloud etc.)
- ✓ Product demos and comparison based on programs needs

Elevate your organization's security posture with Trace3's Exposure Validation and CTEM Advisory Services, identifying unseen gaps in security controls and validating defenses against evolving threats—ensuring your protections are evidence-based, not assumption-driven. For more information, contact your Trace3 Security expert or find us at [Trace3.com](https://www.Trace3.com).
