

As cybersecurity threats grow more sophisticated, many organizations turn to Managed Security Service Providers (MSSPs) for help monitoring, managing, and responding to attacks. But not all MSSPs are created equal. Choosing the right partner directly impacts security, visibility, and cost. The best MSSPs align with business goals, offer clear reporting, and scale with evolving needs. Trace3 delivers on all fronts—providing tailored, enterprise-grade security backed by deep expertise and a commitment to client success.

### OVERVIEW

A poorly matched MSSP can lead to missed alerts, lack of visibility, slow response times, or even gaps in your security coverage. Without a structured evaluation, organizations risk committing to a provider that doesn't align with their technologies, requirements, or internal team structure. Trace3 helps guide our customers through a structured, unbiased evaluation of MSSP options tailored to their operational needs. Our team conducts discovery calls to understand your program maturity, pain points, and technology stack. We then compare qualified MSSPs—based on integrations, services offered, SLAs, and pricing—to find the best strategic fit.

### MSSP EVALUATION SERVICES

- ✓ Large pool of potential providers to review and consider as options
- ✓ Results driven review of current pain points, technology dependencies and service requirements
- ✓ Tailored review stage for partners that align with your organization and needs
- ✓ Package options available for services and technology investment

### ADDITIONAL SECURITY OPERATIONS OPTIONS

- ✓ Security Program Assessment
- ✓ Tabletop Exercises
- ✓ GRC Policy Review and/or Creation

Elevate your organization's security posture with Trace3's MSSP Evaluation Services, guiding you through a structured, unbiased assessment to align provider capabilities with your technologies, team structure, and operational goals—ensuring optimal coverage and response.
