TRACE3

AGENTIC AI

Chatbots answer. **Agents act.**

One decides what to say. The other decides what to do, then does it. That shift is the biggest opportunity and the biggest risk on your roadmap.

Weeks

From use case to a working agent. Not quarters

Day one

Governance, security and oversight built in, never bolted on

At scale

One workflow to an enterprise agent workforce

Then: answer a prompt

Prompt → Model → Answer

Now: complete the workflow

Goal → Plan → Act → Adjust

THE GAP

- **Pilots multiply.** Value doesn't scale.
- **Agents touch live systems** with little human oversight.
- **Chatbot-era security breaks** once agents escalate access.
- **Governance and adoption** lag the pace of deployment.

WHAT IT TAKES

- **Use cases ranked by ROI**, not hype.
- **Trustworthy AI governance** built in from day one.
- **Architecture that integrates** and holds up in production.
- **Every agent onboarded like a new hire**: monitored, accountable.

1. **Discover** — High-value use cases
2. **Prioritize** — ROI and readiness
3. **Prove** — POC in weeks
4. **Build** — AI Agent Factory
5. **Govern** — Monitor and scale
