

### ENDPOINT SECURITY BY TRACE3 ENDPOINT PROTECTION FOR YOUR ORGANIZATION

The ever-growing number of managed and unmanaged devices that access a company's data and ecosystem rapidly increases the attack surface and presents business and security risks. By managing endpoints to reduce the attack surface, your organization will have the ability to detect, provision, deploy, update, and troubleshoot endpoints in a centrally managed way.

#### OVERVIEW

Modern endpoint security solutions go beyond endpoint protection, detection, and response to include XDR, MDR, and extended endpoint protection capabilities. Your organization doubtlessly has a wide variety of endpoint device types in your environment today. With the reality of a dispersed workforce utilizing anywhere anytime any device access, endpoint security has never been more critical to your enterprise.

Trace3 will provide a team of experienced endpoint security consultants to facilitate alignment with stakeholders and your endpoint SMEs, then design, coordinate, and ultimately deliver configured and documented endpoint protection environments.

We will help you understand your current state capabilities around endpoint security and plan for the future utilizing modern endpoint techniques like Security Orchestration, Automation, and Response (SOAR), plus technology

consolidation such as endpoint and data protection capabilities in one solution, driving dynamic endpoint policies, file exemption, reducing false positive noise, and more. Trace3's endpoint security experts will advance modern email capabilities for your organization including:

- Tools rationalization and consolidation
- Patch and vulnerability management
- Application blocking and control
- Network access control
- Policy tuning of endpoint protection solutions
- Procedure and runbook integration
- Integration with other security technologies to support near real-time protection and response capabilities for your endpoints

#### OFFERING DETAILS

##### **Advisory, Assessment and Rationalization**

Advisory services including:

- Analysis of holistic endpoint protection strategies and programs
- Evaluation of existing technology investments with correlation to organizational requirements, use cases, and interoperability
- Proofs of concept (POCs) to evaluate new technologies

##### **Implementation**

Once an endpoint technology has been chosen by the organization, Trace3's technical specialists will:

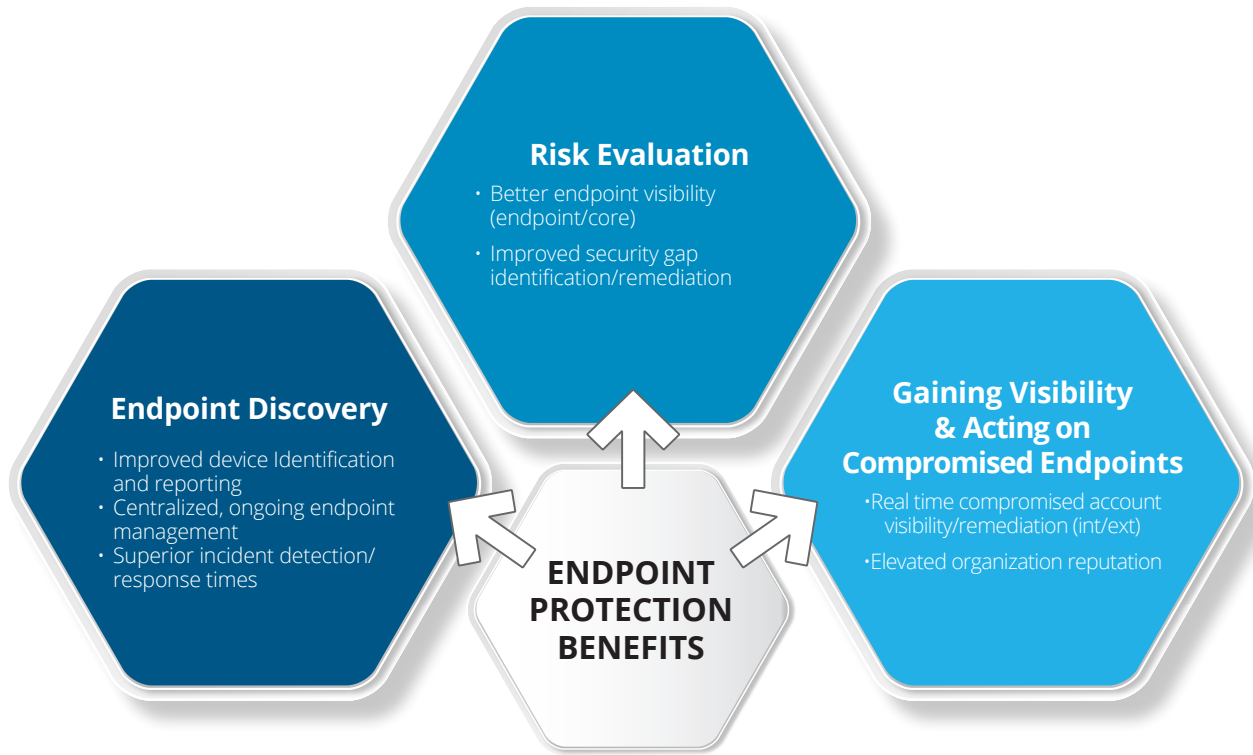

- Design and architect
- Implement
- Replace legacy technologies
- Test and validate
- Support roll-out

##### **Health Check & Optimization**

Optimizing your endpoint technology environment, including:

- Reviewing current solutions for what is working and what is not
- Update rules to apply necessary changes
- Evaluate false positives and negatives and tune accordingly

## VALUE

### Endpoint Security with Trace3

Discover how Trace3 can support your integration of best of breed technology to win the war against adversaries trying to infiltrate your organization and gain control of your endpoints. We will help you optimize your endpoint security operations, implementing endpoint security solutions with correct policies and procedures to protect your organization.

**TAKE BACK CONTROL OF YOUR ENDPOINTS AND SAFEGUARD YOUR ORGANIZATION AGAINST ADVANCED THREATS. FOR MORE INFORMATION, CONTACT YOUR TRACE3 SECURITY EXPERT OR FIND US AT TRACE3.COM.**
